

YEAR 2006 TURNOVER: HIGHER THAN IN 2005, LOWER THAN IN 2007

The Balance in year 2006 has gone much further than our rosier prospects, we have almost doubled the already good results we achieved in the year 2005, thanks to new Customers and new markets. Improvement during 2007 is a certainly demanding but at the same time stimulating challenge for the whole staff. Product quality, Customer's trust, timeliness in replies, which are our strength point, will help us to achieve our ambitious targets also this year.

EXTENSION WORKS COMPLETED

We succeeded in completing within the scheduled times the about 2000m² extension of our workshop, next to the already existing building. What we realized ensures us to support the good commercial development we achieved from the productive point of view. Indeed, we have already arranged our new lay-out which will increase our company productivity. In the new areas we have already installed a new painting equipment and all what is necessary to assemble more than one complete press at the same time. Moreover, we have included in our production cycle a PAMA milling/boring machine, which is working at full capacity and allowed us to manufacture our product inside our workshop at every construction stage; moreover we have extended the areas for flights welding. Apart from that, the increase of our staff will allow us to deal with our Customers' requirements from the commercial point of view. We have done a lot, and we are planning to do even much more.

GPS: AFTER MANY YEARS OF COOPERATION, THE PROJECT HAS BEEN LAUNCHED

For many years Babbini wanted to propose itself as the only company who can manufacture by itself the complete press/gearbox equipment, in order to give certain and immediate benefits to its Customers. That is the reason why, thanks to the Cangialeoni Group, GPS company was founded. This is a dynamic company, established on highly qualified staff, who matured their experience and competence cooperating for years with specialized companies in this field. GPS is an autonomous Company inside the Cangialeoni Group that, apart from directly cooperating and manufacturing gearboxes for Babbini, plans to become a leader Company in the field of gearboxes. Thanks to its dynamism it is highly competitive in the market, its qualified Team is able to help the Customers from designing to after-sale service with spare parts, endoscopic controls and dimensional surveys.

BABBINI CHANGES ITS LOOK

The usual innovative and research attitude characterising our Company led us to improve our look. We have left our logo unchanged, as a symbol of continuity of our Company's setting up, but we have changed the graphics both of our web-site and of all our promotional material. As you will see, our web-site has undergone a deep change, we have looked for a more direct contact with our interlocutors, trying to establish that immediate and simple relationship which characterises our working habits. Inside our web-site we have created a reserved area. By entering his/her own data and prior to our authorization the visitor can enter this higher level of the site. In this reserved area it is possible to see the technical and performance data of our machines. Moreover, the site has a special area for the direct exchange of drawings and information with our registered Customers. Don't hesitate to contact us to get more information about our products/services, we are at your disposal to examine in detail all your requirements.

SUGAR... PUTS IN A GOOD MOOD.

Third episode of the comic-strip and therefore not serious story, of sugar manufacturing.

Filtered again

Filtered again, part of the water evaporates

Saturated again with carbon dioxide

Vacuum concentrated until sugar granules form

Filtered and brought to the temperature of 105 °C

Sugar granules are separated from "molasses" water through two centrifugation phases...

To be continued in next issue...
